1. 1. CamilleX User Manual	3
2. Getting Started	4

1. 1. CamilleX User Manual

[CamilleX](#) new constructs (called `XMachines` and `XContexts`) for Event-B modelling. The new constructs are text files which are automatically translated into the corresponding Rodin's Event-B constructs (i.e., `Machines` and `Contexts`) accordingly. Facility for translating to and from Rodin's components to CamilleX components can be invoked manually. CamilleX is inspired by [Camille](#) text editor for Rodin and is based on [XText](#) technology, hence the name CamilleX.

2. Getting Started

2.0.1 2.1 Installation

[CamilleX](#) is available from the main Rodin update site (under `CamilleX` category). There are two versions of the feature, the standard version for users and the SDK version for software developers which include source code.

2.0.2 2.2 Configuration

Windows users must change the workspace text file encoding to *UTF-8*. This can be updated under the `Rodin Preferences General/Workspace` then in the `Text file encoding` section, select **Other: UTF-8**.

2.0.3 2.3 IMPORTANT

Currently, *CamilleX* not only supports *standard* Event-B machines and contexts, but also supports *Machine Inclusion* (for composition), and *Record* extension to the Event-B modelling language.

Since the *XContexts* and *XMachines* are compiled to the Rodin files, the corresponding Rodin contexts and machines will be **OVERWRITTEN**. Any changes in the Rodin files will not be lost.

DO NOT USE the *CamilleX* if you use modelling plug-ins that use the Rodin files as source such as *UML-B* state-machines and class-diagrams, as the additional modelling elements will be over-written.

This tutorial provides a step-by-step walk-through working with CamilleX constructs.

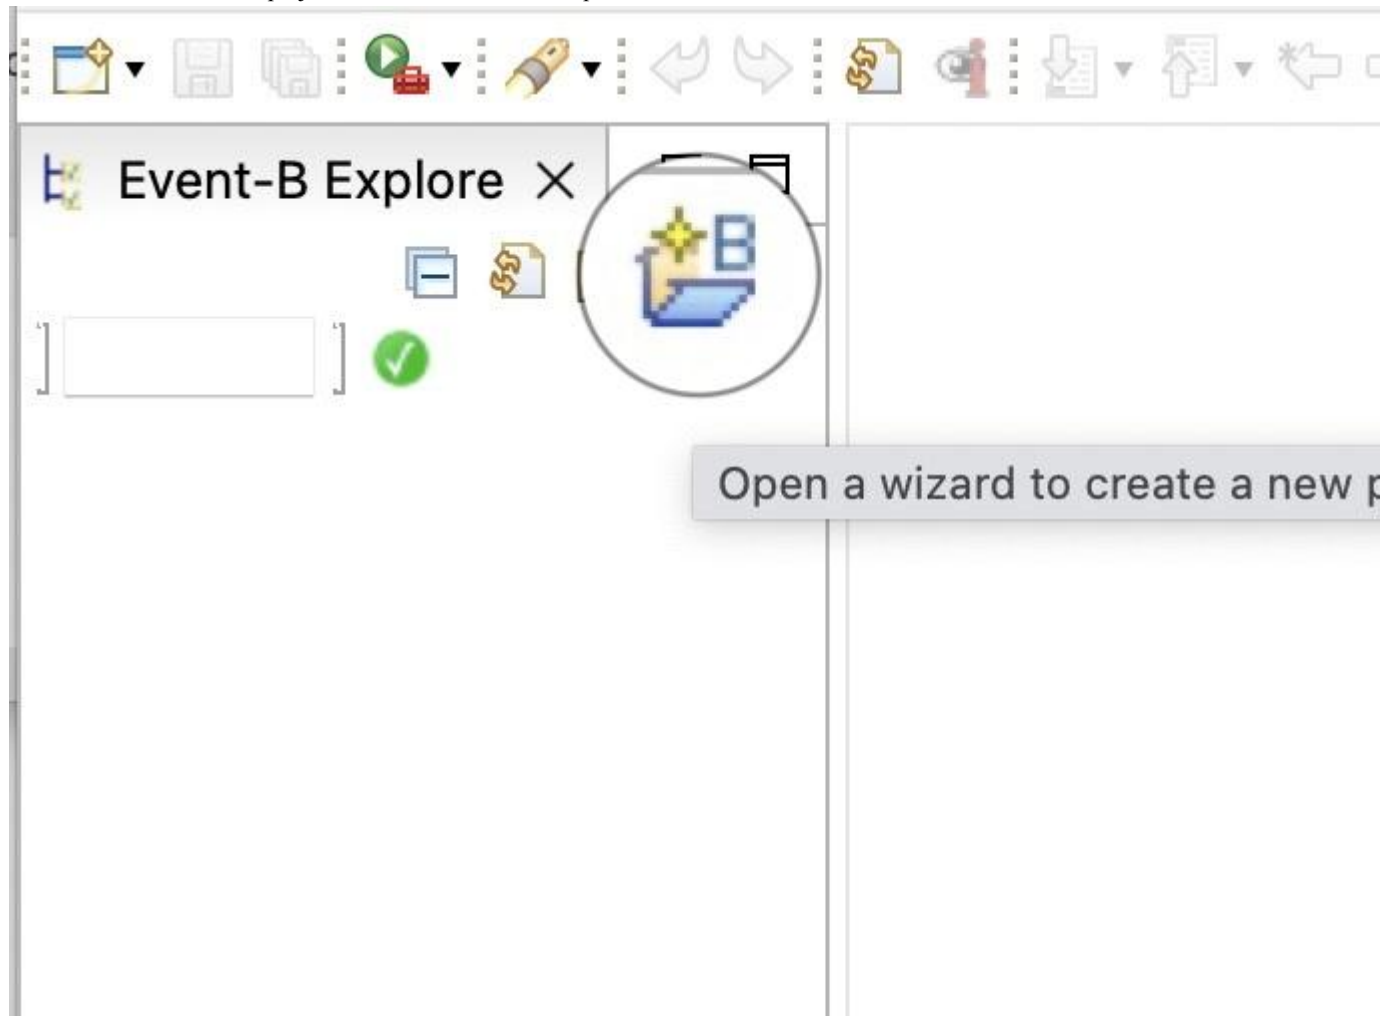

2.0.4 2.4 Task 1. Create a Event-B Project

2.4.1 Introduction

The purpose of this task is to create an Event-B project for the CamilleX constructs.

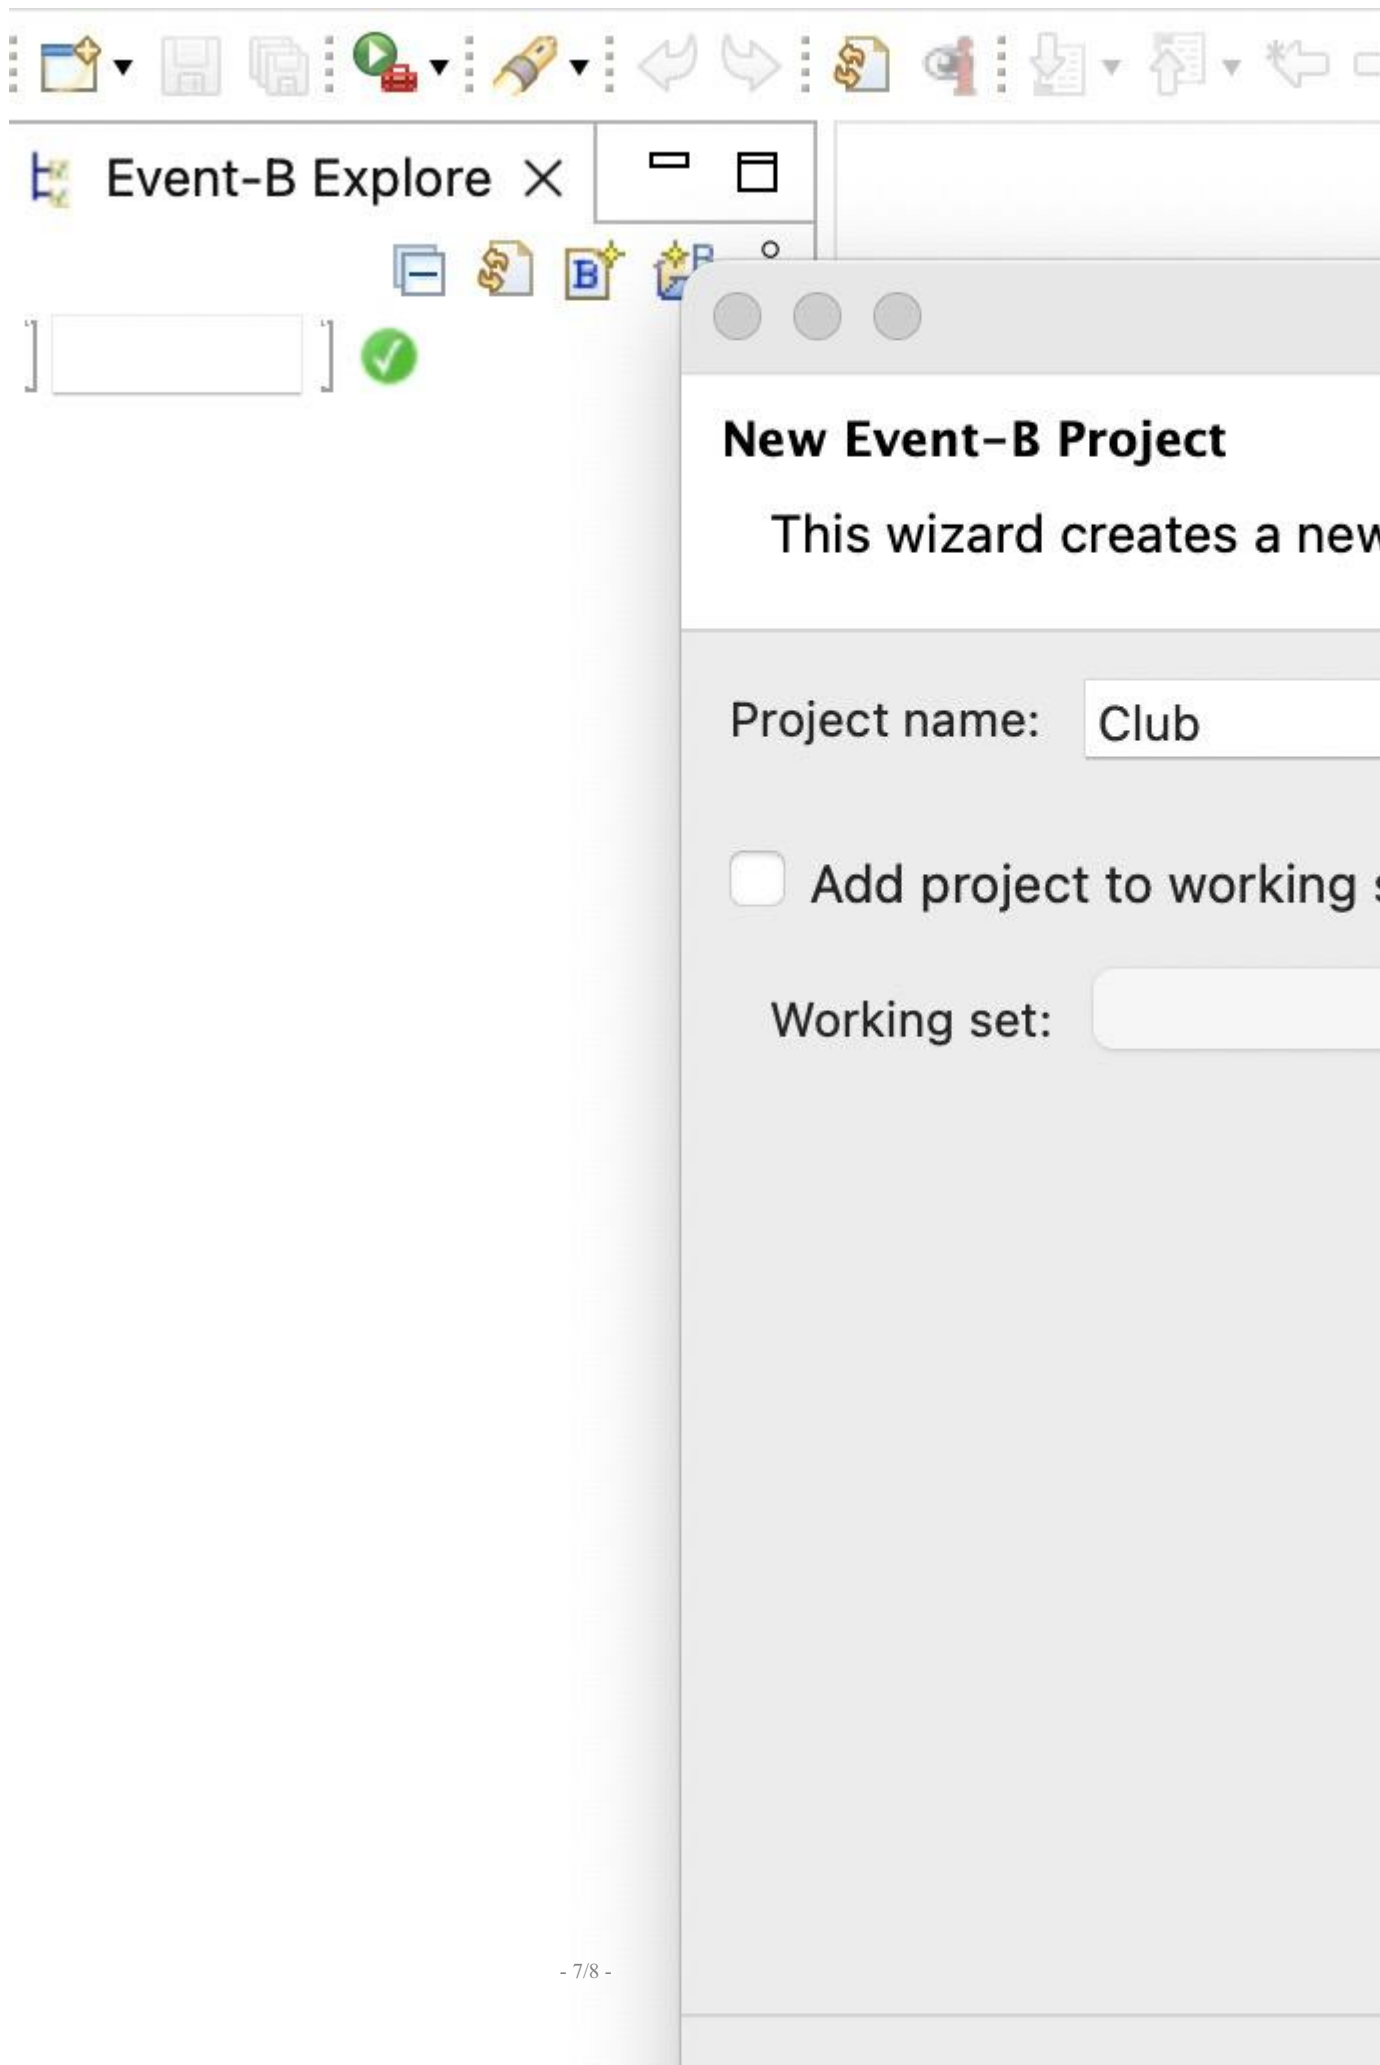

2.4.2 Step 1. Create a New Event-B Project Named `c1ub`

- Click on the new Event-B project button on the *Event-B Explorer*.

(The same wizard can be invoke through the menu `File -> New -> Event-B Project`)

- From the pop-up dialog, enter `Club` as the `Project` name

- Click `Finish` to confirm the creation of the project.

2.4.3 Conclusion

By now, the project `Club` should be visible in the *Event-B Explorer*.

2.0.5 2.5 Task 2. Create an XContext

2.5.1 Introduction

The purpose of this task is to create a simple XContext within the newly created project.

2.5.2 Step 1. Create a New XContext Named `coursesCtx.bucx`

Create a new XContext named `coursesCtx.bucx` using the `New File wizard` (see the following figure). **Important:** A pop-up dialog will be displayed asking to convert the `Club` project to *XText* project, please answer **Yes**
